Subject: Retinal changes in teenagers linked with heart disease later in life- Optometry Today

Researchers have discovered that adolescents with poor health-related quality of life (HRQoL) scores had structural changes in their retinas linked with a higher risk of heart disease.

The scientists from the University of Sydney's Westmead Institute for Medical Research found that adolescents with lower HRQoL scores had wider arteriolar and narrower venular blood vessels in the retina.

Study author, Professor Bamini Gopinath, explained that while poor well-being and specific structural changes in the retina are associated with an increased risk of cardiovascular disease, few studies have explored the link between the two.

"We found that health-related quality of life measures were independently linked to the structural changes we observed. This means the changes will still occur, even if no traditional risk factors, such as higher body mass and blood pressure, are present," she explained.

Subject: Engineering the Eye – Hackathon

LVPEI established an innovation center - a think tank establishment - to develop clinically relevant technology for improved eye care. Every year, in July, the innovation center conducts a week-long hackathon where clinicians work closely with engineers and designers. This year, we are opening this opportunity to Optometrists as well.

Date & Place: 4-8th July 2018, Hyderabad

How to register: Please click the below link to register

<http://www.lvpei.tech/engineering-the-eye-2018>

Last date for registration: Registrations close on 4th June 2018

No participation fee; Accommodation will be provided.

The registrations will be confirmed on first come first served basis. Places are limited. Hurry!

Date: 24 May 2018

Subject: SUNY awards honorary doctorate to Kovin Naidoo

Professor Kovin Naidoo, CEO of Brien Holden Vision Institute, was awarded an honorary Doctor of Humane Letters by the State University of New York (SUNY) for his work to expand access to eye care across the world.

Prof Naidoo was joined at the SUNY School of Optometry 2018 Commencement Ceremony by Dr Frank Schaeffel, Professor of neurobiology of the eye at the Institute of Ophthalmic Research at the University of Tübingen (Germany), who received an honorary Doctor of Science for advancing understanding of vision.

Commenting on the award, Professor Brian Layland, Chair of BHVI, said Prof Naidoo's tireless efforts over several decades have resulted in significant advances in the development of eye care for people in need.

"Kovin Naidoo has been a champion at all levels – firstly delivering eye care, establishing programs, securing funding, building research capacity and advocating strongly for this cause in Africa; then applying this strategic approach and his boundless energy to global efforts," he said.

"Most recently, he has been the architect of the Our Children's Vision campaign, a global collaboration of organisations focused on expanding access to eye health services for more children in more locations, which has so far reached around 20 million children."

Prof Naidoo said he was honoured to be recognised by such a prestigious institution.

Subject: Scientists report wearing spectacles is linked to intelligence

University of Edinburgh researchers have reported that a higher level of cognitive function is linked with wearing spectacles. The research, which was published recently, identified 148 independent genetic loci influencing general cognitive function.

As well as a range of health variables, including longevity and hypertension, the scientists found that whether or not a person wears spectacles is connected to their mental agility.

They conclude that a spectacle-wearer is 28% more likely to be intelligent than a person who does not require visual correction. The study examined data from 300,486 individuals between the ages of 16 and 102 taken from Cohorts for Heart and Aging Research in Genomic Epidemiology, the Cognitive Genomics Consortium and UK Biobank.
